EDUCATION

Bachelor of Engineering (B.E.) in Computer Science and Engineering CHENNAI INSTITUTE OF TECHNOLOGY  CGPA - 8.40	2024 – 2028
Class 12th : 89% Velammal Vidyalaya	2023 – 2024
Class 10th : 91% Velammal Vidyalaya	2021 – 2022

PROFESSIONAL EXPERIENCE

Enterprise Integration Services Intern Flex	11/2025 – 12/2025 chennai , Tamil Nadu
- Monitored and analyzed real-time B2B integration flows using webMethods Integration Server and Trading Networks, gaining exposure to enterprise-level data exchange systems , also supported debugging of JDBC connectivity issues by analyzing logs and resolving configuration inconsistencies, leveraging AI-based tools for faster diagnosis. - Explored Salesforce CRM workflows and core data structures to understand customer and sales data pipelines, utilizing AI-assisted insights to interpret relationships and improve data handling efficiency. - Developed interactive dashboards in Tableau, converting raw business data into structured visual insights, with selective use of AI tools for data interpretation and presentation refinement.	

PROJECTS

FineTuned TinyLlama for Structured output

TECH : Python, Hugging Face Transformers, PEFT (LoRA/QLoRA), TRL, BitsAndBytes, PyTorch, TinyLlama, Google Colab

- Built and fine-tuned a QLoRA-based TinyLlama model for schema-aligned JSON response generation from natural language instructions.
- Designed an end-to-end instruction-tuning pipeline with preprocessing, tokenization, 4-bit quantization, and LoRA integration.
- Optimized low-resource LLM training on a T4 GPU and deployed the LoRA adapters to Hugging Face for public inference.

QueryMind : System aware Database management Agentic System

TECH : Python, FastAPI, LangChain, n8n , LLaMA , SQLAlchemy, MySQL, React, TailwindCSS

- Built an **agentic LLM-based** system to convert natural language queries into validated SQL using **LangChain** and **LLaMA**, enabling real-time interaction with structured databases.
- Implemented **schema aware** filtering, alias mapping, and a validation pipeline for write operations to ensure accuracy and data integrity.
- Optimized token usage by **~90%** through structured prompt design and context pruning, improving response efficiency and reducing computational overhead.

AAC TAMIL NEXT WORD PREDICTION

TECH : Python, TensorFlow (Keras), Bi-GRU, LSTM and BiLSTM, NLP, IndicNLP, NumPy, Streamlit

- Built a Tamil next-word prediction system using **Bi-LSTM** and **Bi-GRU** models along with **GloVE embeddings**, addressing sequential dependencies and enabling context-aware language generation for assistive communication.
- Implemented a bridge-based Tamil-English-Tamil pipeline to handle low-resource constraints, achieving **79% top-3** and **86% top-5** prediction accuracy.

Retail Attribute Extractor Agent : Agentic CV-to-Catalog Pipeline

TECH : Python, LangChain, YOLOv8 (Ultralytics), CLIP/ViT for attribute classification, FastAPI

- Developed a multi-modal AI pipeline that processes product images using **YOLOv8** to extract attributes such as category, color, and style, combining computer vision with LLM-based reasoning.
- Designed an LLM-driven mapping layer to convert visual outputs into structured, **schema aligned JSON**, automating product tagging workflows and reducing manual cataloging effort

SKILLS

PROGRAMMING LANGUAGES: Java , Javascript , C/C++ , Python

TECHNOLOGIES/Frameworks: RAG , Unsloth , Lora/Qlora , LangChain , LangGraph , PyTorch , TensorFlow , Scikit-learn

CLOUD/DATABASE: Pinecone , ChromaDB , MYSQL , AWS Services(S3 , Lambda , EC2), MongoDB

TOOLS: Colab , FireBase , n8n , Flowise , OpenCV , YOLO

CERTIFICATES

- NPTEL - Introduction to IOT (scored 80%)
- Google Android Developer Virtual Internship
- LinkedIn - DATASTRUCTURES IN JAVA
- AWS Cloud Practitioner Essentials
- MongoDB Basics for Students
- Cisco-Intro to Data Science

ACHEVEMENTS

Ranked 4th at HACK36, a national-level hackathon hosted by MNNIT Allahabad

WORLD COMPUTER HACKER LEAGUE - REGIONAL ROUND(3RD ROUND) FINALIST

SOLVED 500+ QUESTIONS IN LEETCODE
